## ROSELLE CATHOLIC HIGH SCHOOL ATHLETIC DEPARTMENT

### **Physical Education and Sports Teams Physical forms**

## Please read completely before filling out! Please staple all pages together when submitting!

#### \*PLEASE NOTE:

ALL sport physical forms are due to the RC Health Office BEFORE the start of tryouts.

#### \*PLEASE NOTE:

A physical <u>MUST</u> have been performed within 365 days of the first practice of the season. <u>NO EXCEPTIONS</u>.

#### \*PLEASE NOTE:

All participants must return the completed parent medical questionnaire for each sport season, <u>EVEN IF A PHYSICAL IS ALREADY ON FILE</u>.

## ALL FORMS MUST BE COMPLETED FOR A STUDENT ATHLETE TO COMPETE.

ALL INCOMPLETE FORMS WILL BE RETURNED TO THE STUDENT FOR COMPLETION

ATTENTION PARENT/GUARDIAN: The preparticiaption physical examination (page 3) must be completed by a health care provider who has completed the Student-Athlete Cardiac Assessment Professional Development Module.

## ATHLETES CARDIAC SCDDEN じ N N O N DEATE

Sudden Cardiac Death The Davic Facts or in Young Athletes

Dedicated to the health of all children" American Academy of Pediatrics

udden death in young athletes between the ages of 10 done to prevent this kind of What, if anything, can be and 19 is very rare. tragedy?

# What is sudden cardiac death in the young athlete?

ultimately dies unless normal heart rhythm time) during or immediately after exercise heart function, usually (about 60% of the pumping adequately, the athlete quickly result of an unexpected failure of proper is restored using an automated external without trauma. Since the heart stops collapses, loses consciousness, and Sudden cardiac death is the defibrillator (AED).

# How common is sudden death in young

Sudden cardiac death in young athletes is The chance of sudden death occurring to any individual high school athlete is reported in the United States per year. very rare. About 100 such deaths are about one in 200,000 per year.

other sports; and in African-Americans than common: in males than in females; in football and basketball than in in other races and ethnic groups. Sudden cardiac death is more

# What are the most common causes?

by one of several cardiovascular abnormalities roo-LAY-shun). The problem is usually caused ventricular fibrillation (ven-TRICK-you-lar fib-Research suggests that the main cause is a and electrical diseases of the heart that go loss of proper heart rhythm, causing the blood to the brain and body. This is called unnoticed in healthy-appearing athletes. heart to quiver instead of pumping

also called HCM. HCM is a disease of the heart, muscle, which can cause serious heart rhythm The most common cause of sudden death in problems and blockages to blood flow. This (hi-per-TRO-fic CAR- dee-oh-my-OP-a-thee) genetic disease runs in families and usually an athlete is hypertrophic cardiomyopathy with abnormal thickening of the heart develops gradually over many years.

The second most likely cause is congenital abnormalities of the coronary (con-JEN-it-al) (i.e., present from birth)

(commonly called "coronary artery disease," which may lead to a heart arteries. This means that these blood vessels are connected to heart in an abnormal way. This differs from blockages that may the main blood vessel of the occur when people get older

# SUIDDEN CARDIAC DEATH IN YOUNG ATHLETES for screening young athletes? Other diseases of the heart that can lead to sudden death in young people include:

- inflammation of the heart muscle (usually Myocarditis (my-oh-car-DIE-tis), an acute due to a virus).
- Dilated cardiomyopathy, an enlargement of the heart for unknown reasons.
- abnormal fast heart rhythms that can also Long QT syndrome and other electrical abnormalities of the heart which cause run in families.
- Marfan syndrome, an inherited disorder especially if being tall is not common in generally seen in unusually tall athletes, that affects heart valves, walls of major arteries, eyes and the skeleton. It is other family members.

# Are there warning signs to watch for?

In more than a third of these sudden cardiac deaths, there were warning signs that were not reported or taken seriously. Warning signs are:

- Fainting, a seizure or convulsions during physical activity;
- excitement, emotional distress or being Fainting or a seizure from emotional startled;
- Dizziness or lightheadedness, especially during exertion;
- Chest pains, at rest or during exertion;
- extra beats) during athletics or during cool down periods after athletic participation; beating unusually (skipping, irregular or Palpitations - awareness of the heart
- Fatigue or tiring more quickly than peers; or
- to shortness of breath (labored breathing) Being unable to keep up with friends due

# What are the current recommendations

once per year. The New Jersey Department of ("medical home") or school physician at least Education requires use of the specific Preparticipation Physical Examination Form (PPE). New Jersey requires all school athletes to be examined by their primary care physician

student-athletes answering questions about shortness of breath); and questions about This process begins with the parents and symptoms during exercise (such as chest pain, dizziness, fainting, palpitations or family health history.

because it is so essential to identify those at drowning or car accidents. This information during physical activity or during a seizure. know if any family member died suddenly The primary healthcare provider needs to must be provided annually for each exam They also need to know if anyone in the unexplained sudden death such as family under the age of 50 had an risk for sudden cardiac death.

measurement of blood pressure and a careful discovered on exam, no further evaluation or listening examination of the heart, especially there are no warning signs reported on the for murmurs and rhythm abnormalities. If The required physical exam includes health history and no abnormalities testing is recommended.

# Are there options privately available to screen for cardiac conditions?

### Sports-Related Concussion and Head Injury Fact Sheet and Parent/Guardian Acknowledgement Form

A concussion is a brain injury that can be caused by a blow to the head or body that disrupts normal functioning of the brain. Concussions are a type of Traumatic Brain Injury (TBI), which can range from mild to severe and can disrupt the way the brain normally functions. Concussions can cause significant and sustained neuropsychological impairment affecting problem solving, planning, memory, attention, concentration, and behavior.

The Centers for Disease Control and Prevention estimates that 300,000 concussions are sustained during sports related activities nationwide, and more than 62,000 concussions are sustained each year in high school contact sports. Second-impact syndrome occurs when a person sustains a second concussion while still experiencing symptoms of a previous concussion. It can lead to severe impairment and even death of the victim.

Legislation (P.L. 2010, Chapter 94) signed on December 7, 2010, mandated measures to be taken in order to ensure the safety of K-12 student-athletes involved in interscholastic sports in New Jersey. It is imperative that athletes, coaches, and parent/guardians are educated about the nature and treatment of sports related concussions and other head injuries. The legislation states that:

- All Coaches, Athletic Trainers, School Nurses, and School/Team Physicians shall complete an Interscholastic Head Injury Safety Training Program by the 2011-2012 school year.
- All school districts, charter, and non-public schools that participate in interscholastic sports will distribute
  annually this educational fact to all student athletes and obtain a signed acknowledgement from each
  parent/guardian and student-athlete.
- Each school district, charter, and non-public school shall develop a written policy describing the prevention and treatment of sports-related concussion and other head injuries sustained by interscholastic student-athletes.
- Any student-athlete who participates in an interscholastic sports program and is suspected of sustaining a
  concussion will be immediately removed from competition or practice. The student-athlete will not be
  allowed to return to competition or practice until he/she has written clearance from a physician trained in
  concussion treatment and has completed his/her district's graduated return-to-play protocol.

#### **Ouick Facts**

- Most concussions do not involve loss of consciousness
- · You can sustain a concussion even if you do not hit your head
- A blow elsewhere on the body can transmit an "impulsive" force to the brain and cause a concussion

### Signs of Concussions (Observed by Coach, Athletic Trainer, Parent/Guardian)

- Appears dazed or stunned
- Forgets plays or demonstrates short term memory difficulties (e.g. unsure of game, opponent)
- Exhibits difficulties with balance, coordination, concentration, and attention
- Answers questions slowly or inaccurately
- · Demonstrates behavior or personality changes
- Is unable to recall events prior to or after the hit or fall

#### Symptoms of Concussion (Reported by Student-Athlete)

- Headache
- Nausea/vomiting
- Balance problems or dizziness
- Double vision or changes in vision

- Sensitivity to light/sound
- Feeling of sluggishness or fogginess
- Difficulty with concentration, short term memory, and/or confusion

#### What Should a Student-Athlete do if they think they have a concussion?

- Don't hide it. Tell your Athletic Trainer, Coach, School Nurse, or Parent/Guardian.
- Report it. Don't return to competition or practice with symptoms of a concussion or head injury. The sooner you report it, the sooner you may return-to-play.
- Take time to recover. If you have a concussion your brain needs time to heal. While your brain is healing you are much more likely to sustain a second concussion. Repeat concussions can cause permanent brain injury.

### What can happen if a student-athlete continues to play with a concussion or returns to play to soon?

- Continuing to play with the signs and symptoms of a concussion leaves the student-athlete vulnerable to second impact syndrome.
- Second impact syndrome is when a student-athlete sustains a second concussion while still having symptoms from a previous concussion or head injury.
- Second impact syndrome can lead to severe impairment and even death in extreme cases.

### Should there be any temporary academic accommodations made for Student-Athletes who have suffered a concussion?

- To recover cognitive rest is just as important as physical rest. Reading, texting, testing-even watching movies can slow down a student-athletes recovery.
- Stay home from school with minimal mental and social stimulation until all symptoms have resolved.
- Students may need to take rest breaks, spend fewer hours at school, be given extra time to complete assignments, as well as being offered other instructional strategies and classroom accommodations.

## Student-Athletes who have sustained a concussion should complete a graduated return-to-play before they may resume competition or practice, according to the following protocol:

- Step 1: Completion of a full day of normal cognitive activities (school day, studying for tests, watching practice, interacting with peers) without reemergence of any signs or symptoms. If no return of symptoms, next day advance.
- Step 2: Light Aerobic exercise, which includes walking, swimming, and stationary cycling, keeping the intensity below 70% maximum heart rate. No resistance training. The objective of this step is increased heart rate.
- Step 3: Sport-specific exercise including skating, and/or running: no head impact activities. The objective of this step is to add movement.
- Step 4: Non contact training drills (e.g. passing drills). Student-athlete may initiate resistance training.
- Step 5: Following medical clearance (consultation between school health care personnel and studentathlete's physician), participation in normal training activities. The objective of this step is to restore confidence and assess functional skills by coaching and medical staff.
- Step 6: Return to play involving normal exertion or game activity.

P 609-259-2776 F 609-259-3047

### NJSIAA STEROID TESTING POLICY

### **CONSENT TO RANDOM TESTING**

In Executive Order 72, issued December 20, 2005, Governor Richard Codey directed the New Jersey Department of Education to work in conjunction with the New Jersey State Interscholastic Athletic Association (NJSIAA) to develop and implement a program of random testing for steroids, of teams and individuals qualifying for championship games.

Beginning in the Fall, 2006 sports season, any student-athlete who possesses, distributes, ingests or otherwise uses any of the banned substances on the attached page, without written prescription by a fully-licensed physician, as recognized by the American Medical Association, to treat a medical condition, violates the NJSIAA's sportsmanship rule, and is subject to NJSIAA penalties, including ineligibility from competition. The NJSIAA will test certain randomly selected individuals and teams that qualify for a state championship tournament or state championship competition for banned substances. The results of all tests shall be considered confidential and shall only be disclosed to the student, his or her parents and his or her school. No student may participate in NJSIAA competition unless the student and the student's parent/guardian consent to random testing.

By signing below, we consent to random testing in accordance with the NJSIAA steroid testing policy. We understand that, if the student or the student's team qualifies for a state championship tournament or state championship competition, the student may be subject to testing for banned substances.

### **NJSIAA Banned-Drug Classes** 2010 - 2011

The term "related compounds" comprises substances that are included in the class by their pharmacological action and/or chemical structure. No substance belonging to the prohibited class may be used, regardless of whether it is specifically listed as an example.

Many nutritional/dietary supplements contain NJSIAA banned substances. In addition, the U. S. Food and Drug Administration (FDA) does not strictly regulate the supplement industry; therefore purity and safety of nutritional dietary supplements cannot be quaranteed. Impure supplements may lead to a positive NJSIAA drug test. The use of supplements is at the student-athlete's own risk. Student-athletes should contact their physician or athletic trainer for further information.

acetazolamide

benzhiazide

bumetanide

chlorothiazide

chlorthalidone

ethacrynic acid

hydrochlorothiazide

hydroflumenthiazide

methyclothiazide

flumethiazide

furosemide

metolazone

polythiazide

triamterene

quinethazone

spironolactone

trichlormethiazide

and related compounds

bendroflumethiazide

The following is a list of banned-drug classes, with examples of banned substances under each class: (c) Diuretics

(a) Stimulants amiphenazole amphetamine bemigride benzphetamine bromantan caffine1 (guorana) chlorphentermine cocaine cropropamide crothetamide diethylpropion dimethylamphetamine doxapram

ephedrine (ephedra, ma huang) ethamivan ethylamphetamine fencamfamine

meclofenoxate methamphetamine methylenedioxymethamphetamine nandrolone (MDMA, ecstasy) methylphenidate nikethamide pemoline pentetrazol phendimetrazine phenmetrazine phentermine

phenylpropanolamine (ppa) picrotoxine pipradol prolintane strychnine

synephrine (citrus aurantium, zhi shi,

bitter orange)

and related compounds

(b) Anabolic Agents anabolic steroids androstenediol androstenedione boldenone clostebol dehydrochlormethyltestosterone dehydroepiandrosterone (DHEA) dihydrotestosterone (DHT) dromostanolone epitrenbolone

fluoxymesterone gestrinone mesterolone methandienone methenolone

methyltestosterone norandrostenediol norandrostenedione norethandrolone oxandrolone oxymesterone oxymetholone pregnelone stanozolol testosterone2

tetrahydrogestrinone (THG)

trenbolone and related compounds

other anabolic agents

clenbuterol

#### (e) Definitions of positive depends on the following:

1 for caffine - if the concentration in urine exceeds 15 micrograms/ml

2 for testosterone - if administration of testosterone or use of any other manipulation has the result of increasing the ratio of the total concentration of testosterone to that of epitestosterone in the urine of greater than 6:1, unless there is evidence that this ratio is due to a physiological or pathological condition.

(d) Peptide Hormones & Analogues: corticotrophin (ACTH)

human chorionic gonadotrophin (hCG) leutenizing hormone (LH) growth hormone (HGH, somatotrophin) insulin like growth hormone (IGF-1)

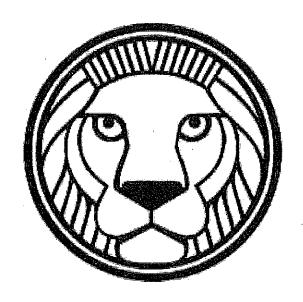

All the respective releasing factors of the above-mentioned substances also are banned:

erythropoietin (EPO) darbypoetin sermorelin
